

## Main Street and 200 East (State Route 106) Resurfacing *Shepard Lane to 1700 South*

As part of an effort to maintain existing infrastructure, the Utah Department of Transportation (UDOT) is scheduled to begin the resurfacing of Main Street and 200 East (State Route 106) in Farmington, Utah from Shepard Lane (at the intersection of US Highway 89 and Shepard Lane) to 1700 South (at the intersection of 1700 South and S.R. 106) from May 26 to mid-June, 2015.

The majority of construction work will be performed at night; construction will occur during late evening hours from 8 p.m. to 10 a.m. Monday through Friday.

Construction will occur at various locations throughout the corridor until work is complete. Traffic will be reduced to a single lane within the work zone. Flaggers will be located at the north and south entrances of the project area. A pilot car will also be used to guide drivers safely through the work zone. Motorists should expect moderate travel delays.

Residents should expect noise from heavy machinery operating nearby (such as back up alarms) and some vibration from pavement rollers.

Because construction crews will require access to the entire road, on-street parking will be prohibited within the work zone. During this time, we ask that you please park in the driveway or outside of the workzone.

If you have questions or concerns, please contact the project public relations manager below:
